DETAILED ACTION

Applicant's election of claims 49 – 55 with traverse is noted. The restriction requirement was reviewed and it is considered to be proper by the examiner insofar as the manner of claiming embraces catheters and endoscopes as well as inter alia endotracheal tubes there is a large body of art associated with actuator features in association with internally placed tubular members.

Therefore the restriction requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 49 –53 and 55 are rejected under 35 U.S.C. 102(a) as being obvious based on Frass et al (US5499625) in view of Patacsil et al(US6132379).

Frass et al teaches an endotracheal tube having a proximal pharyngeal cuff 22 and distal actuator – encircling cuff 18 fluidically coupled to the proximal end of the tubular device and suggests device placement under ultrasonography per col. 1 top portion, however Frass et al does not literally show an extracorporeal transducer and imaging means. However it would have been obvious in view of Patacsil et al. col. 9

Application/Control Number: 10/730,690

Art Unit: 3768

lines 48 – 55 to effect such endotracheal device placement using a transducer array extracorporeally placed near the traches.

Claim 54 is rejected under 35 U.S.C. 103(a) as being unpatentable over Frass et al in view of Patacsil et al as applied to claim 49 above, and further in view of Lowe et al (US5775328) since it was known in the latter to visualize structure adjacent and around an endotracheal tube by using Doppler imaging.

The following art is cited as of interest:

US5765568 – Dual balloons 56, 60 on a venous/arterial catheter with acoustic transmissive saline coupling and ultrasound image positioning.

US5411027 – Dual catheter-mounted isolation balloons 14, 15 having physiologic saline inflation fluid such that ultrasound imager 1 – 7 can monitor at least the initial placement.

US6287290 – Two or more endotracheal tube balloons 122, 132 with col. 3 discussion of saline use since ultrasound both monitors and treats the regional lung pathology.

US6253770 Acker – Dual catheter balloons Figs. 1F and 1G with acoustic or ultrasonic sensor position-locating use described in cols. 15 – 16 bridging and saline advocated in col. 7 for a positive actuation response.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Application/Control Number: 10/730,690

Art Unit: 3768

TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later

than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication should be directed to Jaworski

Francis J. at telephone number 571-272-4738.
